

Applied Generative AI Engineer Take Home Question

Premise

We want a model that takes a question and answer pair and returns a difficulty level, 1-5. We have some training and validation data below. You can use any open source tools and models you'd like to make this happen.

Data

- https://storage.googleapis.com/remilon-public-forever/hendrycks_math_train.csv
- https://storage.googleapis.com/remilon-public-forever/hendrycks_math_test.csv

Question

Please create/train/fine tune/etc. a model that can do this well. Include in your submission all your code and output that clearly demonstrates how well your model works.

Add a document in Latex where you explain the procedure that you used it.
